

Lab 5: Minecraft Helper

Use the code provided to you through github to configure the Minecraft Helper skill through the Amazon Developer Console and the AWS Lambda Management Console.

Take a screenshot of your Service Simulator Request & Response boxes after you've successfully run a command and Alexa has responded. Submit your screenshot.

Lab 5 Extension

Extend the Minecraft Helper skill you configured in Lab 5 to do at least three **different** new things (i.e., things it does not already do).

This could mean adding new sample utterances, adding new recipes, and/or adding new intents (or something else that you think of).

You should do 3 different types of things (so don't add three new recipes), and then commit your code to your github branch.

Then test your skill on your Amazon Echo device, and be ready to demo it to us in our next class!
