

Lesson 8

(5 min)

Logistics

- Join the Remind thread
 - Group text is easy place to ask questions that others are also facing
- Check in —
 - **Syncing with master** — do you need me to do it for you or are you comfortable doing it on your own now?
 - Can everyone commit code?
- Assignments format
 - Do you prefer instructional videos or text docs?

(5 min)

Share Screen — talk about issues I've noticed working individually with students

- Eclipse
 - Which project you should have open (samples, not root directory)
 - How to update project (refresh or Maven —> Update project)
- GitHub Desktop
 - How to update code to master
 - How to commit

(10 min)

- Building a skill with custom slots — minecraft helper
 - Importance — why?
 - Procedure — how?

(30 min)

Zoom – breakout groups

- Build minecraft helper using the code provided in Github
- Configure it to work
- Then extend it to make it more meaningful to you / other users

(15 min)

Student Presentations

- How did you extend it?
- What issues did you run into?
- How did you resolve them?

(5 min)

Wrap Up / where we are headed:

- So far, a lot of set up and getting things to work
- Using code that's already been written
- Goal is for us to be able to produce that code
 - Not only customize skills, but write them from scratch
- Questions?
- Is there a need for set office hours? Or you want to keep it open?
- Would it help for me to be "online" at certain times on Zoom? So you can reach out to me there?
